LABELLING MACHINES

A part of the ENE Group

The measure of tailored engineering

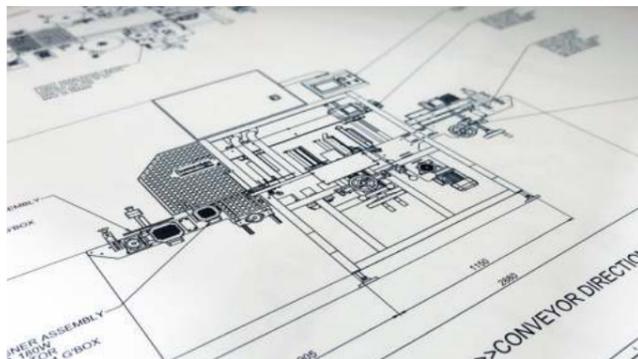

About Sovereign

Sovereign Labelling Machines was established in Essex back in 1993, since then the company has grown to become a brand widely recognised for its design & manufacture of top-quality, reliable labelling & sleeving machinery across many industries and across the world. This success is the product of a strong determination to maintain a standard that exceeds expectation- we call this **The Sovereign Standard**. Our, unique, fully stainless-steel systems are designed to suit even the harshest of production environments with the renowned benefit of minimal on-going maintenance costs, ensuring that production lines all over the world can operate at the highest level, with the most reliable and efficient outcome.

Sovereign Labelling Machines became part of the ENE Group in 2018 and has continued to succeed both in terms of capabilities and expertise, while still maintaining the high standard that has been associated with the brand since its early days. Our bespoke & innovative machinery is now manufactured at our state-of-the-art facility in Banbridge, Northern Ireland, which is equipped with the latest CNC laser cutting, milling and turning machinery. We also boast one of the finest stainless-steel fabrication facilities in the country that is the epitome of tailor-made engineering. This, alongside our facilities & team of experienced professionals based in Clacton-On-Sea, allow us to provide clients with a comprehensive range, covering all production line needs including; labelling, sleeving, robotic handline and conveyors, which can span from small, standalone units to complete, bespoke production lines.

Labelling machines

Sovereign Labelling manufactures a range of labelling machines to apply any type of self-adhesive label to just about any product face, in any orientation and configuration conceivable. We have systems to suit all budgets and the technical expertise to take on the seemingly impossible.

Of particular note is our all stainless steel Monarch labelling head used extensively in harsh production environments such as dairy and food. Our Monarch in-line labelling systems champion the labelling industry when it comes to a seamless label application. They typically perform at speeds up to 400 label applications per minute, 24 hours per day 7 days per week making them the preferred choice over rotary systems in many situations.

Sleeving systems

The Sovereign range of compact heat-shrink sleeving systems includes highly advanced and innovative full-body and tamper-evident sleeves covering a wide speed range. These sleeve labelling machines offer a simple, compact yet, versatile design that aims to suit all applications while operating at minimal low-cost maintenance.

The Sovereign range of stretch sleeving systems includes servo-controlled in-line stretch sleeving labellers that apply a 360-degree surround pre-printed plastic film to a product, effecting a close bond to its contours, without the need for adhesive or heat.

Robotic handling

Sovereign Labelling is a TOSHIBA Robot integrating partner with several successful systems installed worldwide.

We have used both SCARA and 6-AXIS robots for loading/unloading product or using the robots to orientate and present difficult to handle components to the labelling system.

Each robotic machine is fully integrated into the machine control system making setup and change-overs both quick and exact.

Conveyors

With a wealth of engineering expertise in conveying and automated handling, our conveyors are custom designed, manufactured and installed to increase product flow and efficiency of workload. Our end of line conveyors are designed to compliment all your conveying needs.
